## REQUEST FOR CERTIFICATE OF CORRECTION UNDER 37 CFR § 1.323

**Attention: Certificate of Correction Branch**
Commissioner for Patents
Office of Patent Publications
ATTN: Certificate of Correction Branch
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

Under the provisions of 35 U.S.C. § 255, Applicants request that the Office issue a Certificate of Correction in connection with the above-identified patent for the correction of clerical and typographical mistakes. A completed form PTO 1050 showing the corrections is attached.

The corrections requested do not constitute new matter. The text to be inserted at Column 10, line 67 appears in U.S. Pat. No. 6,973,478 (U.S. Application Ser. No. 09/696,558 filed Oct. 25, 2000), of which the current patent is a continuation-in-part. Application Ser. No. 09/696,558 was incorporated in the current patent by reference. The error was made in good faith when a page was inadvertently omitted from the filing of U.S. Application Ser. No. 10/082,495, from which the current patent issued. Additionally, pages 44 and 45 of Application Ser. No. 10/082,495 were inadvertently
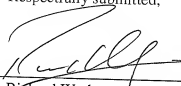

submitted in reverse order, leading to the request for corrections at Column 20, line 54 and Column 21, line 24.

Please charge the fee due under 37 C.F.R. § 1.20(a) and any other fees deemed due for this submission to our deposit account no. 02-2135. Please credit any overpayment to our deposit account no. 022135.

Respectfully submitted,

Date: _6/10/09_          By _____

Richard Wydeven

## CERTIFICATE OF CORRECTION

PATENT NO.    : 7,035,828

APPLICATION NO.: 10/082,495

ISSUE DATE    : April 25, 2006

INVENTOR(S)   : KETONEN et al.

It is certified that error appears in the above-identified patent and that said Letters Patent are hereby corrected as shown below:

## In the Specification

Col 10, line 67, after "are" insert -- displayed, and updates to the local and administrative interaction databases are made (events G-I[M]),

FIG. 4c shows a screen shot of the information produced when a customer was listening to a Paul Simon recording. The information includes a an album offer (from Amazon) and links to a review, concert information, and a news group article.

**7.** News Notification Application

**FIGS. 5a-5b** illustrate the flow of information and sequence of events when a Local Assistant News Assistant application operates on a Customer computer **100**. In such an application, a News assistant ruleset contains a task to be executed periodically. This task retrieves a news summary document from the News Assisted Merchant's site. As an example, the following is a rule that retrieves current news from cnet.com:

```
<PE>
<Catld>StepInfo</Catld>
<Key>getcnet</Key>
<feature>cnet.xml</feature>
<steptype>task</steptype>
<repeattime>15</repeattime>
<feature>cnet.xml</feature>
<Do>
    <set>cnetfound "false"</set>
    <getpage>
    "http://news.cnet.com/" --
```

## CERTIFICATE OF CORRECTION

PATENT NO.    : 7,035,828

APPLICATION NO.: 10/082,495

ISSUE DATE     : April 25, 2006

INVENTOR(S)    : KETONEN et al.

  It is certified that error appears in the above-identified patent and that said Letters Patent are hereby corrected as shown below:

## In the Specification (cont)

     Col 20, line 54, after "login=jsimith" insert --means to log in under the name jsmith and "paswd=53xyz?!7" means that the password is 53xyz?!7. The broker 210 responds by opening a secure connection SCX' 132 such as HTTPS to a trusted mini-server 220. The mini-server 220 interprets the request and invokes the rule for retrieving Amazon order status information using the login name and password data from the URL. The mini-server 220 obtains the HTML reply page from Amazon and extracts the desired status information. The mini-server 220 then generates a response HTML document which provides the status information in a format which can be displayed on a Palm device. The response is trasmitted from the min-server 220 to the broker 210 over the SCX' connection and from the broker 210 to the mobile client 200 over the SCX connection 130. After transmitting the response, the SCX 130 and SCX' 132 connections may be closed.
     Private requests may involve mobile client 200 access to and modification of personal data on the client's personal agent 100 (desktop computer). Examples include transactions based on stock portfolios, accounting information, or personal schedule items, or in the case of an enterprise application sales information, production information, and schedules stored on the personal agent 100 computer. Private requests may be used to remotely run applications on and manipulate information stored on the personal agent 100. The accessed data on the personal agent 100 can be used to generate data for web transactions.
     An example of a private request may be an encripted query from the mobile client 200 which is qued by the broker 210. The broker 210 then transmits the query to the personal agent 200 which decrypts the query, performs the requested tasks and may return requested information which is stored on the broker 210. The mobile client 200 --
